

Wei Wei

Software Engineer — Backend & AI/LLM

Java | Distributed Systems | GenAI / RAG | Spring AI / LangChain4j

+86 180 5623 8261 (WhatsApp) | weiwei.eng@gmail.com | Nanjing, China

Chinese Citizen | Relocation: Ready for Germany | Available for Remote Interviews

PROFESSIONAL PROFILE

Software Engineer with nearly 4 years of experience in high-throughput backend systems and GenAI/LLM applications. Currently at iSoftStone, leading an 8-person backend team responsible for architecture design and delivery of million-record geospatial data platforms. Combines deep Java ecosystem expertise (Spring Boot/Cloud, distributed systems, JVM tuning) with LLM engineering (LangChain4j, Spring AI, RAG, Function Calling). B.Sc. in Computer Science (Anabin H+). Seeking a Backend or AI Engineering role in Germany.

WORK EXPERIENCE

iSoftStone Information Technology | Nanjing, China

Mar 2023 - Present

Backend Engineer

- Led a backend team of 8 engineers delivering geospatial data platforms. Defined system architecture, established code review standards, conducted technical interviews, and mentored junior developers. Maintained the highest client satisfaction rating as the primary delivery-side technical contact across quarterly project evaluations.
- Redesigned the team's development workflow, CI/CD pipeline, and toolchain — increasing per-engineer delivery velocity by 73% (measured by completed story points per sprint, Q2 2024 vs. Q1 2024 baseline). Recognized with the corporate Efficiency Improvement Award.
- Led greenfield development of three million-record geospatial data platforms (Road Data, Transit Data, Facility Data) for a national infrastructure client. Authored end-to-end technical specifications, designed database schemas, and trained operations teams on platform maintenance.

BeyondSoft Technology | Hangzhou, China

Jul 2020 - Feb 2021

Product Operations Associate (Client: Xiami Music / Alibaba Group)

- Supported product operations at an Alibaba Group music streaming platform, coordinating content workflows between technical and business teams in a large-scale internet company environment.

Independent Engineering Study & Portfolio Development

Feb 2021 - Feb 2023

- Intensive self-study in Java backend engineering, distributed systems, and LLM technologies. Built portfolio projects including the NeoPick marketplace platform (see Additional Information).

KEY PROJECTS

AI Tour Guide Agent System | Backend Lead

Apr 2026 - Jun 2026

- Built an intelligent, location-aware tour guide Agent using Java 21, Spring AI, LangChain4j, RAG, and PostgreSQL (PgVector). Designed end-to-end RAG pipeline: text ingestion, chunking, embedding, keyword + semantic + geospatial retrieval. Reduced content hallucination below 2% through strict prompt constraints, structured RAG retrieval, and automated eval benchmarks (Ragas-based pipeline).
- Architected a unified Function Calling orchestration layer with automated fallback (timeout retry, degradation, default response) and user-level sliding-window memory management. Core service availability: 99.9%, maintained over the deployment period and measured via automated health-check endpoints.

National Road Data Platform | Architecture & Lead Developer

Mar 2023 - Present

- Built a million-record, multi-source map data ingestion and management platform powering national traffic conditions and topology editing. Integrated workflow orchestration with optimised JDBC batch insertion — reduced data ingestion pipeline from days to hours (80%+ efficiency gain).
- Designed a Python plugin architecture for pluggable quality inspection — compressed rule iteration from weeks to days. Tuned database indexing and batch processing for 30%+ improvement in query response time.

Transit & Infrastructure Data Engine | Lead Developer

Jul 2024 - May 2025

- Led multi-source transit data pipeline design (Ingestion, Normalisation, Diff, Aggregation, Publishing), replacing transit datasets across 371 Chinese cities and expanding coverage to metro systems in Japan and Korea.
- Developed a custom stop-to-station data fusion algorithm using multi-source cross-validation — 97.5%

automated data cleaning rate, 98% accuracy against reference datasets. Built a tile-data retrieval engine (Quartz + integrity validation), expanding facility coverage to 109 cities.

TECHNICAL SKILLS

Languages	Java 8/17/21, Python, SQL
Frameworks	Spring Boot/Cloud, Spring AI, LangChain4j, MyBatis, Quartz
AI / LLM	RAG, Function Calling, PgVector, Vector Search, Embeddings
Data & Storage	PostgreSQL/PostGIS, MySQL, Redis, Elasticsearch
Messaging	Apache Kafka, RabbitMQ
Tools & Practices	Git, Maven, Docker, AWS, Kubernetes, Agile/Scrum

LANGUAGE SKILLS

Chinese	Native speaker (Mandarin)
English	C1 — Business Fluent (daily use in technical documentation, code review, and client communication)
German	A1 — enrolled in structured coursework, working toward B1

EDUCATION

Suzhou University (宿州学院) | Suzhou, Anhui, China

Sep 2016 - Jul 2020

Bachelor of Science in Computer Science

- Degree listed in the German Anabin database: Institution H+, B.Sc. Computer Science — qualifies for EU Blue Card under the recognised degree pathway.

AWARDS & RECOGNITION

- Efficiency Improvement Award (2024, iSoftStone) — 73% team throughput increase through workflow and toolchain optimisation.
- 3-Star Competency Award (iSoftStone) — top-tier individual performance rating awarded to the highest-performing engineers across the delivery organisation.

ADDITIONAL INFORMATION

- EU Blue Card: Qualified via recognised degree (Anabin H+ B.Sc. Computer Science). Documentation ready: degree certificate, Anabin entry, employment confirmation.
- Relocation: Ready to relocate to Germany. Preferred cities: Berlin, Munich, Hamburg, Frankfurt, Cologne. Available for remote interviews during German business hours (UTC+2 mornings = UTC+8 afternoons).
- NeoPick Case Study: End-to-end class-booking marketplace platform — competitive analysis, user personas, PRD, system architecture, and full-stack implementation. Full documentation:
NeoPick Case Study (Google Drive)

Nanjing, August 2026
